

ISCE ENHANCEMENTS Estimate

1. Metric Conversion Tables
2. Indicate Actual Dollar for Cost Summary and Columns (reference 6/5/01 email)
3. Option to update costs later. Costs must be updated before uploading. (refer John's 5/14/01 email)
4. When USAISEC-FDEO certify; the system does not wipe what was previously listed in the text block of the certification but only over write the first set of characters with the new text leaving a random message from the previous certification in the text block – (Operational Problem – refer to John's 5/14/01 email)
5. The following is an Operational Problem found by John V. (refer to 5/14/01 email):
The user used the model featured at the start of a project asking for nine (9) buildings. They changed their mind and renamed the buildings – they only needed eight (8). The user inadvertently left the name field for the ninth building "blank".
He tried to delete this ninth ICON – wouldn't work without a name.

He tried to again Rename the ICON - the program would not accept any name change for the "blank" field. He WAS STUCK.

He deleted the project and began a new.

Recommend:
 - a. If a "blank" name is not allowed - do not let the user exit the Rename option with a blank - make the user insert something.
or
 - b. Allow the ICON Delete option to work on an unnamed ICON.
6. Add email option to Registration Form (reference 4/12/01)
7. Check to see if user is an NT Administrator and abort the auto download if not (refer to 3/5/01 email)
8. Automatically set users Disk Space from 15 60 0 so they won't get DISK FULL error msg or remove the check.
9. Ability to select the Scientific Calculator.
10. Update Army Reserve table (i.e., Installation)
11. Indicate on header that ACF is applied to Cost Model (i.e., Cost Model ACF is ____)
12. Allow the user to IMPORT when user clicks on TAB F and FTP down to the ISCE software. –
13. Show Small Order Cost Factor split between Primary & Supporting on Cost Summary same as mainframe.
14. Eliminate 429 error (vspell file)
15. Allow the user to download multiple forms from stand-alone mode.

16. Multiple Document Interface (MDI)

The following are items CSC has identified as potential enhancements

1. Auto check for Static Table updates (ACFs)
2. On Cost Model generation, if there are discrepancies that are displayed in a dialog box, give the user the ability to double click on the error and have it take them to the screen where the error occurred.
3. Display more information on the drop-down line items list (UM, Costs, etc)
4. Display ACFs in the installation selection dialog box.
5. Create shortcuts on desktop when ISCE is installed
6. Allow user to move line items up/down in grid areas
7. Improve Cost Model reports (cosmetic)
8. Add 'Recent File' list to opening screen (Open, New, Create From)
9. Change references from Section 17 to Tab F
10. Incorporate a list box when users select Activity menu option on uploads/downloads
